SUMMARY

Software Engineer with 3 years of experience building and optimizing high-throughput, distributed payment systems in the BFSI domain. Contributed to architectural decisions around cloud-native modernization, messaging design, and performance engineering for SEPA/Instant Payment platforms — achieving a 5x throughput improvement. Contributes to system design discussions, mentors peers, and drives AI governance initiatives.

EXPERIENCE

Software Development Engineer - 2

August 2023 – Present

SBS (formerly Sopra Banking Software)

Noida, India

- Drove performance engineering end-to-end: achieved 5x throughput improvement on the Instant Payment platform through Java code optimizations, JVM profiling, application and infra tuning, and load/burst/endurance testing — establishing benchmarking practices adopted across teams.
- Strong functional knowledge of EU payment schemes — SEPA Credit Transfer (SCT) and SEPA Instant (SCT Inst) including ISO 20022 messaging (pacs/pain), R-transactions, settlement cycles, routing, reconciliation, and CSM integrations with STET, SWIFT (RT1, TIPS), Equens Worldline, and Faster Payments.
- Owned CI/CD pipeline design and containerization for a distributed monolith to cloud-native migration using Docker, Open Liberty, Helm, and Kubernetes — modularized 15+ services with GitLab CI/CD.
- Strengthened system resilience — implemented graceful startup/shutdown, circuit breakers, dead-letter queues with idempotent retry strategies, and resolved a critical memory leak in a payment gateway connector via JVM profiling, stabilizing production under sustained load.
- Integrated Kafka for new microservices while maintaining backward compatibility with ActiveMQ/IBMMQ; led transition from SOAP to RESTful APIs and replaced Hazelcast with Redis — enabling decoupled processing, reduced latency, and cloud-native interoperability.
- Built observability dashboards, SLA monitoring, and alerting on Dynatrace; part of SaaS Ops team managing customer onboarding, UAT coordination, and go-lives across EU markets with zero downtime.
- Provided L3 production support for a multi-tenant SaaS platform processing 2-6M+ transactions/month per bank.
- Championed code review practices — 60% drop in post-release defects over 6 months; improved test coverage (backend 27%→60%, frontend→95%).
- Spearheaded front-end migration from JSF to Angular 16+, improving page load times and UI responsiveness.
- Contributed to AI Governance Squad (GenAI guidelines and guardrails); delivered technical workshops on Kafka, Redis, and JVM internals — mentoring 4+ engineers.

TECHNICAL SKILLS

Languages: Java, TypeScript, Python, SQL, Bash, HTML/CSS

Frameworks: Jakarta EE, MicroProfile, JBoss, Open Liberty, Spring Boot, Spring Batch, Hibernate, Angular 16+, Node.js, OAuth2

Infra: Docker, Kubernetes, Helm, Kafka, Redis, ActiveMQ, IBMMQ, PostgreSQL, MySQL, AWS S3, Dynatrace, GitLab CI/CD, Linux

Tools: YourKit, k6, JUnit, Mockito, Karma, Jasmine, SoapUI, Postman, SonarQube, Liquibase, Maven, Git, Jira, Confluence

Practices: Distributed Systems, High Availability, Microservices, Event-Driven Architecture, REST API Design, ISO 20022, OOP, TDD, Design Patterns, JVM Internals, Performance Engineering, Agile/Scrum

EDUCATION

Noida Institute of Engineering & Technology

B.Tech in Computer Science & Engineering — CGPA: 8.78/10

Greater Noida, U.P.

Jun 2019 – Jun 2023

ACHIEVEMENTS

Highest number of awards in the organization — CI/CD improvements, production hotfixes, customer go-lives, Angular adoption, code reviews and code refactoring.

Runner-up (Top 2/47 teams) in SBS Cybersecurity Hackathon.

500+ DSA problems solved | GATE 2023 qualified | Fully funded scholarship for Bachelors degree.
